Second METALSTAR 2 Line for Independent Can Company

US based Independent Can Company, one of the world's prominent specialty tin manufacturers, has signed a contract with KBA-Metalprint for a second Metalstar 2 Line to be installed in mid 2009. The new print line will be a four-color UV press to compliment Independent Can's existing six-color Metalstar 2. In addition to the new four-color Metalstar 2 a new Sprint 490 in-line UV coater will be added to the existing six-color Metalstar by the end of 2009.

Independent Can plans to take advantage of the Metalstar's efficient, high speed, single pass production, continuous-grip registration and advanced printing quality. The new press will also reduced set-up time and yield energy savings compared with traditional metal decorating presses. "The expansion of our printing capacity will afford us the opportunity to provide our customers with shorter lead times and at the same time offer state-of-the-art technology that includes fully integrated pre-press and plate-making.", said Rick Huether, Independent Can's President and CEO.

Independent Can Company is a world leader in the manufacturing of specialty metal packaging and metal lithography.
